

Digi Connect® WAN Family

- Digi Connect WAN Flash demos
- Ethernet to high speed GSM/CDMA wireless gateways/routers
- Enterprise primary and backup wireless WAN connectivity
- Unique Digi SureLink™ "always-on" connection
- 10/100Base-T or serial connection to existing router
- Industrial and GSM-R options available

More customers than ever now require that not only the devices in their central data center be connected, but also devices at remote locations. Digi has identified this new space as Remote Device Management and we now offer a suite of hardware and software solutions that utilize cellular networks. Available in GSM and CDMA models, the Digi Connect WAN family includes:

- Digi Connect WAN 3G - 3G high speed upgradeable HSDPA/EV-DO Rev. A Wireless WAN cellular router with integrated VPN.
- Digi Connect WAN - 2.5G Wireless WAN cellular router. Provides TCP/IP data communications via cellular GSM EDGE/CDMA 1xRTT networks to remote sites and devices.
- Digi Connect WAN VPN - 2.5G Wireless WAN cellular router plus integrated VPN. Creates a secure WAN connection via an Ethernet-to-cellular interface.
- Digi Connect WAN IA - 2.5G Wireless WAN gateway with all of the features of Digi Connect WAN VPN, plus an industrial-grade feature set.
- Digi Connect WAN GPRS - 2G Wireless WAN cellular router. Provides reliable GPRS wireless TCP/IP data communications via cellular networks. Ideal for M2M applications.
- Digi Connect WAN GSM-R - 2G Wireless WAN cellular router. Provides wireless TCP/IP data communications via cellular GSM-R networks for railways.
