

TFT Display Data Image with touchscreen set

The Data Image TFT display with touch screen is assigned to be used with the PXA270 and PXA270M DIMM PC - Development kit. When purchased together with the complete development kit, the display is supplied as installed and mounted to the stylish aluminium case top lid. When ordered separately, the display is supplied with the touch screen, touch pen, cables and necessary PXA270 DIMM Base Board adapter and headers.

The display is supported in OS Linux (Opie).
